

ErgoShield™

Performance // Protection

ErgoShield™ is an innovative approach to aerosol actuators, combining the protective benefits of an overcap with consumer-friendly functionality, that's specially designed for 2-piece cans. With ErgoShield, users are provided with a more natural and ergonomic index finger deviation. The actuator flows over the can's collar, rather than sitting on the valve, resulting in a seamless blend with your packaging, to deliver both a differentiated shelf appearance and an elevated dispensing experience, no matter the market it serves.

ErgoShield™

Consumer-Friendly Functionality
with a Modern Design
