

Designed with  LifeCycle™ Technology

Replay™ Connector

Refill // On-The-Go

Replay™ Connector is an easier refill system for fragrance on-the-go needs. Designed to create a more convenient and sustainable solution for consumers to take their favourite fragrance with them. Replay Connector fits perfectly on fragrance retail bottles that have a screw neck. Simply remove the existing pump and replace it with the Replay Connector. Consumers can refill their travel-size fragrance bottles to take with them for all their on-the-go needs. Based on Silgan's Pirouette™ screw pump technology, a SNI13 option has been developed to provide exactly the same spray experience on-the-go as at home. This easy refill system will increase unsafe and brand loyalty.

Replay™ Connector
