Feather-Line Lids

Lightweight Design // Reduced Carbon Footprint

Feather-Line lids offer up to 25% weight reduction, minimizing CO2 footprint and plastic usage; maintaining performance and efficiency. Made from supple biobased polyethylene instead of brittle polypropylene, they enhance haptics and durability. As mono-material products, they are 100% supporting a circular economy. Feather-Line combines sustainability and functionality, delivering a smart, eco-friendly quality packaging solution.

Feather-Line Lids

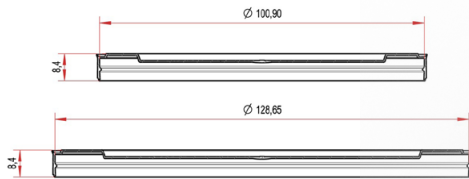

When truly sustainable packaging is your ultimate goal

- Improved overall sustainability:
 - Extreme lightweight lids saving up to 25% product weight
 - Bio-based PE material based on the ISCC Plus mass-balance approach; virgin on request
 - 100% recyclable in standard waste streams
- Designed for efficient handling and processability on standard capping lines
- Produced in HACCP-approved factories and with ISCC Plus mass balance certification
- Versatile food application: (infant) nutrition and instant powders, supplements, seeds, nuts
- Fit on standard tinplate cans

Design specifications

- Diameter: 99 mm and 127 mm
- Height: 8.4 mm
- Additional dimensions for composite and tinplate cans are being developed
- Developed to be used efficiently in high speed capping lines
- Produced in HACCP-approved factories and with ISCC Plus mass balance certification
- Also available in bio-based or chemically recycled material via the mass-balance approach
